Powering Kruger's next century.*

Discovery Green and Sasol partner to advance one of Africa's most iconic conservation areas on its clean energy journey.

Oct 08, 2026 10:00 CAT

Renewable energy partnership to help decarbonise Kruger National Park in its centenary year.

Skukuza, 8 October 2026- South African National Parks (SANParks) and AmpliEnergy today announced a landmark private-sector renewable energy sponsorship agreement for South African conservation, starting with Kruger National Park (KNP) in its centenary year. The supply is equivalent to more than 25% of the park's annual electricity consumption and will help advance KNP's sustainability and decarbonisation goals.

Ampli Energy is a month-to-month renewable energy product from Discovery Green in partnership with Sasol.

Conservation is about more than nature

Kruger, SANParks' largest electricity user, accounts for about 70% of the organisation's scope 2 emissions. Demand is also growing: Kruger welcomed more than 1.8 million guests in 2025.

Building large-scale renewable generation on site would demand significant capital and land, and the best use of SANParks' land is conservation, not energy generation.

South Africa's evolving electricity market offers another route. Renewable energy can now be generated where it makes most sense and delivered through the electricity network to where it is needed.

Dr Sarushen Pillay, Executive Vice President: Business Building, Strategy and Technology, said: "Ampli Energy is demonstrating how South Africa's industrial base can be a catalyst for both energy security and the energy transition. By using our Secunda complex as the backstop offtaker for Ampli's renewable energy portfolio, we are accelerating decarbonisation across our business while helping SANParks and other organisations do the same. With its scale and energy demand profile, Secunda is a cornerstone of South Africa's energy system, showing how the country's largest industrial assets can support both energy security and the transition. We are excited to see Ampli bringing to life the vision we share with Discovery Green: making renewable energy accessible at scale and helping organisations such as SANParks achieve their sustainability goals." The partnership is already in action. Through Ampli, Discovery Green and Sasol have provided the renewable energy supply that matches more than 25% of the park's electricity consumption for the past few months.

Hapiloe Sello, SANParks CEO, said the supply is part of a broader strategy to modernise infrastructure and improve resilience.

"Kruger National Park is not only South Africa's premier tourism destination, but also a cornerstone of conservation in our country and across the SANParks system. By securing renewable energy equivalent to more than 25% of the park's annual electricity consumption, we are strengthening the

park's long-term sustainability, improving energy resilience and demonstrating how conservation institutions can contribute meaningfully to a lower-carbon future," she said.

A partnership for the next century

The partnership will help SANParks progressively reduce the emissions associated with its electricity use, while it remains focused on its core conservation mandate.

Andre Nepgen, CEO of Discovery Green, says, "We deeply value our partnership with SANParks. Through Ampli Energy, we are sponsoring the park with renewable energy in a way that supports the economic and environmental health of South Africa. This contribution supports SANParks' mission to conserve, expand and sustainably manage the country's natural and cultural assets for current and future generations."

The partnership also strengthens Kruger's position as a nature-based tourism destination. Sello says, "Today's travellers increasingly seek destinations that demonstrate genuine environmental responsibility. By integrating renewable energy into park operations, Kruger National Park strengthens its ability to combine exceptional visitor experiences with responsible environmental management."

Nepgen concludes: "It is a privilege to apply our data-led approach to renewable energy in partnership with Sasol through Ampli Energy to support an iconic South African institution. We are proud to help power KNP's next 100 years."

Discovery information

About Discovery

Discovery Limited is a South African-founded financial services organisation that operates in the healthcare, life assurance, short-term insurance, banking, savings and investment and wellness markets. Since inception in 1992, Discovery has been guided by a clear core purpose – to make people healthier and to enhance and protect their lives. This has manifested in its

globally recognised Vitality Shared-Value insurance model, active in over 37 countries with over 50 million members. The model is exported and scaled through the Global Vitality Network, an alliance of some of the largest insurers across key markets including AIA (Asia), Ping An (China), Sumitomo (Japan), John Hancock (US), Manulife (Canada) and Vitality Life & Health (UK, wholly owned). Discovery trades on the Johannesburg Securities Exchange as DSY.

About Discovery Green

Discovery Green, backed by the scale and actuarial expertise of the Discovery Group, is a licensed energy trader operating a proprietary renewable energy platform for South African businesses. The platform applies actuarial modelling to design and optimise diversified wind and solar portfolios, replacing on average 90% of a client's electricity demand with cost-effective, price-certain renewable energy. Through long-term power purchase agreements with some of the country's largest renewable energy plants, Discovery Green aggregates supply, optimises coverage against client load profiles, and delivers long-term price certainty, regulatory compliance, and measurable decarbonisation at scale.

About Sasol

Sasol is a global energy and chemicals company. We harness our knowledge and expertise to integrate technologies and processes into world-scale operating facilities.

We strive to safely and sustainably source, produce and market a range of high-quality products globally, creating value for all our stakeholders.

Please visit www.sasol.com for more information.

About Ampli Energy

Ampli Energy is a market-first, month-to-month renewable energy product from Discovery Green, a Discovery Limited business, in partnership with Sasol. It gives South African businesses and organisations immediate access to renewable energy, helping them reduce most of their electricity emissions. With monthly cashback and anytime, penalty-free cancellation, Ampli Energy makes it easier to go green and save, with no fees, risks or hassles.

About SANParks

South African National Parks (SANParks) is a premier conservation authority operating under the jurisdiction of the Department of Forestry, Fisheries and the Environment (DFFE). Established to conserve, protect, control, and manage national parks and their biological diversity, SANParks currently oversees 20 functional national parks across South Africa, encompassing over 4 million hectares of conservation estate.
