- BlackRock advises on asset allocation and global components.
- Benchmark and performance data sourced from Ninety One.

Illustrative cumulative performance for a R100 lump-sum investment since launch

Fund investment policy

The Cogence Discovery Cautious Dynamic Asset Optimiser Fund of Funds aims to provide inflation beating returns comprising both capital and income. The fund will invest within a low risk profile (in line with the South African Multi-Asset Low Equity sector) targeting investors who seek capital preservation. The investment objective of the fund will be achieved by investing in collective investment schemes in accordance with the Act. The fund will use a quantitative investment strategy to select the underlying funds. The allocation of investments to be included in the Cogence Discovery Cautious Dynamic Asset Optimiser Fund of Funds will be appropriate for retirement funds. The fund will conform to legislation governing retirement portfolios (Regulation 28 of the Pension Funds Act) and is thus suitable as an investment vehicle for retirement portfolios. There will be maximum effective equity exposure (including international equity) of up to 40% of the market value of the fund.

Who this investment may be suitable for

This strategy is suitable for conservative investors prioritising income and capital preservation over capital growth. It is designed for investors with a low tolerance for market volatility who require steady returns with minimal risk. A minimum investment term of two years is recommended.

The fund has adhered to its policy objectives as stated in the supplemental deed.

Historical performance* (net of fees)

Period	Fund	Benchmark
1 month	1.89%	0.76%
3 months	0.21%	-0.77%
YTD	3.41%	2.37%
1 year	17.41%	13.59%
3 year	14.64%	12.18%
5 year	10.79%	10.01%
Since launch (Ann.)	9.10%	7.80%
Since launch (Cum.)	150.02%	120.46%

Performance data longer than 1 year is annualised.

Risk statistics (since launch)

Statistic	Fund	Benchmark
Volatility	6.32%	5.12%
Maximum drawdown	-7.37%	-8.12%
Highest one-year return	20.60%	18.02%
Lowest one-year return	-1.44%	-3.10%
Sharpe ratio (Rf = STeFI)	0.43	0.28

* Performance calculated using the Total Returns Index (TRI), net of fees, with all dividend and/or income declarations reinvested on the declaration date at the net asset value price at that time. Investment performance is for illustrative purposes only.

Asset allocation

All allocations include the exposure created by derivatives.
Data source: Cogence (Pty) Ltd.

Portfolio composition

The Cogence Discovery Cautious Dynamic Asset Optimiser Fund of Funds is constructed as a diversified portfolio of funds across various asset classes and both active and passive strategies. BlackRock advises on asset allocation and global manager selection, while RisCura advises on local manager selection.

During the first quarter of 2026, the portfolio's asset allocation remained broadly stable across all categories. Offshore (global ex-SA) exposure was maintained at 31.30%. Within local assets, SA cash increased to 9.20%, while SA equity remained stable at 12.5%. The allocation to SA bonds was reduced slightly to 47.00%. There were no changes to the local or global managers.

The portfolio remains within the defined risk parameters of a low risk profile in keeping with the ASISA category's equity allowance of up to 40%.

Monthly market commentary

South African equities were broadly flat in May. The FTSE/JSE All Share Index (ALSI) declined by approximately 0.30%. Financials led the market, rising around 0.9%, supported by solid banking earnings. Resources declined by 1% in contrast, while industrials fell 0.88%, as lower oil prices and concerns about global growth weighed on resource-linked stocks.

Listed property also continued to recover, gaining 0.65% for a second consecutive month of positive returns.

Moody's revised its South African outlook from stable to positive, marking its first positive outlook change since 2007. South African fixed income delivered strong returns as yields eased on improved fiscal confidence and increased demand for longer duration bonds.

Inflation moved higher, with the annual rate rising to 4% in April 2026, the highest level since August 2024.

The South African Reserve Bank increased the repo rate by 25 basis points to 7% at its Monetary Policy Committee meeting. The tone of the statement remained hawkish, signalling that further rate increases may be considered, depending on the extent of secondary inflationary pressures.

Following the decision, bond yields rose, with the 10-year South African government bond yield closing the month at 8.4%. Over the same period, the rand strengthened by 2.9% against the US dollar to 16.24 ZAR/USD.

General

Collective Investment Schemes (Unit Trusts) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending (i.e. borrowing and lending of assets). The manager does not provide any guarantee, either with respect to the capital or the return of a portfolio. Any forecasts and/or commentary in this document are not guaranteed to occur. Different classes of participatory interests apply to these portfolios and are subject to different fees and charges. A schedule of all fees and charges, inclusive of VAT and maximum commissions, is available on request from us or from your financial adviser. Forward pricing is used.

A fund of funds portfolio is a portfolio that invests in portfolios of collective investment schemes that levy their own charges, which could result in a higher fee structure for the fund of funds; A co-named portfolio, is a third party named portfolio bearing the name of both the manager and the FSP, that the manager retains full legal responsibility for the third party named portfolio.

Glossary

Annualised return - An annualised return is the weighted average compound growth rate over the period measured.

Highest & Lowest return - The highest and lowest returns for any one year over the period since inception have been shown.

Volatility - Volatility (also called standard deviation) is a measure of how widely the returns varied over the period measured.

Maximum drawdown - A maximum drawdown is the maximum loss from a peak to trough of the portfolio over the period measured, before a new peak is attained.

Sharpe ratio - The sharpe ratio is a measure of risk-adjusted returns. The sharpe ratio reflects the extent to which an investment compensates for extra risk.

NAV - The net asset value represents the assets of a fund less its liabilities.

Specific fund risks

- Derivatives
- Exposure to foreign securities
- Fund of funds
- Drawdown
- Liquidity
- Equities
- Bonds

For a detailed description of these risks, and other risks that are relevant to the portfolio, please refer to the CIS Risk Disclosure Document, available at www.discovery.co.za.

Important information

The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The ability of the portfolio to repurchase, is dependent upon the liquidity of the securities and cash of the portfolio. A manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity, and the manager must keep the investors informed about these circumstances.

Lump-sum performance returns are being quoted. Income distributions, prior to deduction of applicable taxes, are included in the performance calculations. NAV to NAV figures have been used for the performance calculations, as calculated by the manager at the valuation point defined in the deed, over all reporting periods. Investment performance calculations are available for verification upon request by any person. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. The performance is calculated for the fee class. The individual investor performance may differ, as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax.

The rate of return is calculated on a total return basis, and the following elements may involve a reduction of the investor's capital: interest rates, economic outlook, inflation, deflation, economic and political shocks or changes in economic policy. Annualised returns are period returns re-scaled to a period of one year. This allows investors to compare returns of different assets that they have owned for different lengths of time. All period returns greater than one year have been annualised. Returns for periods less than one year have not been annualised. A cumulative return is the aggregate amount an investment has gained or lost over time, independent of the period of time involved. Actual annual figures are available to the investor on request. Illustrative investment performance is for illustrative purposes only.

The Manager retains full legal responsibility for any third party-named portfolio. Where foreign securities are included in a portfolio there may be potential constraints on liquidity and the repatriation of funds, macroeconomic risks, political risks, foreign exchange risks, tax risks, settlement risks, and potential limitations on the availability of market information.

- Performance data reflected in the MDD was sourced from morningstar as at 5th June 2026.
- This document was published on 12 June 2026.

What is the total investment charge (TIC)

Total expense ratio (TER) is the percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over rolling 3 years (or since inception, where applicable), and is annualised, to the most recent calendar quarter-end. A higher TER does not necessarily imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction costs (TC) is the percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation, as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. calculations are based on actual data, where possible, and best estimates, where actual data is not available. Total investment charges (TIC) is the percentage of the value of the portfolio that was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.
