Who this investment may be suitable for

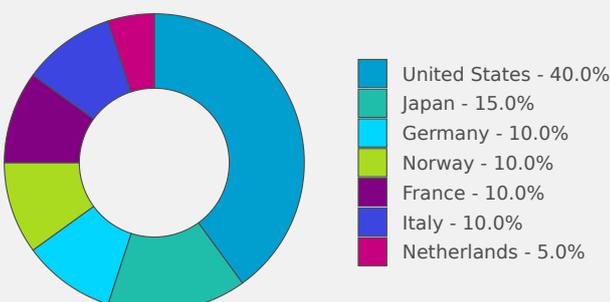

This fund is suitable for equity investors with a medium to long term investment horizon.

Sector allocation chart

All allocations include the exposure created by derivatives.

Geographical allocation chart

Fund overview & investment objective

The fund aims to deliver an annualised target net return of between 10% and 12% p.a. (after annual management fees but before administration fees, adviser fees and taxes) over a three-to-five-year investment period in all but significant falls in share prices. The fund invests in a portfolio of securitised derivative notes linked to at least 20 shares from developed markets ("notes"). These notes utilize various structured payouts on each of the shares to deliver the targeted return over 3 to 5 years. New shares and notes will be chosen on an ongoing, systematic basis to maintain the targeted return over time. **The targeted return is not guaranteed and may change from time to time as market conditions change.**

Investment process

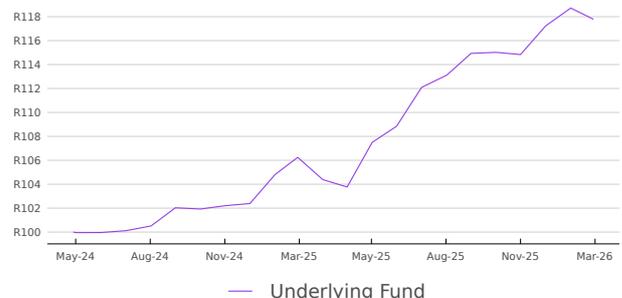

The fund employs a systematic investment process when selecting its portfolio of notes. This process considers liquid, high quality shares from developed markets such as US, Canada, Europe, Japan and Australia. Bloomberg consensus analyst ratings (of at least a "buy" rating) and an optimisation and diversification process is used to filter the final universe of shares.

- The maximum allocation to each underlying share is 5%
- The maximum allocation to financial stocks is 25%
- The maximum allocation to companies from Japan and Australia is 20%
- The maximum allocation to companies from Canada is 10%

The diversification process used by the fund may change from time to time. The fund will hold up to 2% in a Rand cash account.

Please note that this fund will not perform in line with the underlying shares but rather the market value of the notes which are utilised to achieve the target net return.

Illustrative performance for a R100 lump-sum investment *

Please note: the Discovery Return Fund provides investors with exposure to derivatives and therefore investors will not participate directly in the share price movements of the underlying shares. The derivatives held are based on the shares listed in the table below.
