Illustrative cumulative performance for a R100 lump-sum investment since launch

Who this investment may be suitable for

This Fund is suited to investors looking for an actively managed approach to long-term retirement investing.

Fund investment policy

The objective of the portfolio is to maximise the total real returns comprising both capital and income. The risk profile of the portfolio will vary over the investment term and will be adjusted to suit the anticipated risk profile of the participating investors, who are expected to retire close to 2025. The investment risk for this portfolio will be moderate at the launch date, with a notably higher equity and property exposure than the Discovery Target Retirement 2020 Fund, and will be reduced gradually to conservative over the period up to 2025. After 2025 the investment risk will be maintained as conservative.

The allocation to each asset class will vary depending on the investment risk adopted for this portfolio from time to time. The allocation of investments to be included in the Discovery Target Retirement 2025 Fund will be appropriate for retirement funds. The portfolio may also include participatory interests or any other form of participation in portfolios of collective investment schemes or other similar schemes, as permitted by legislation.

Historical performance table

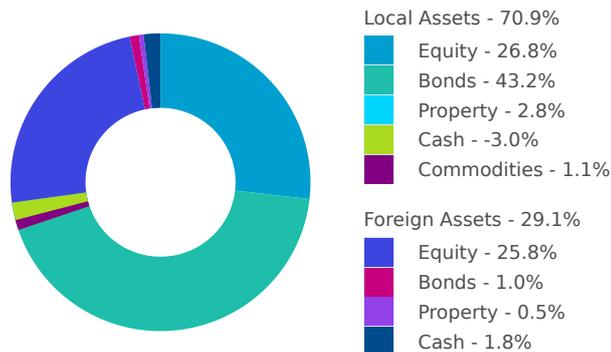

Period (annualised)	Fund	Benchmark
1 year	23.27%	3.49%
3 year	13.74%	4.06%
5 year	11.00%	5.10%
10 year	8.40%	4.66%
Since launch	8.49%	5.27%
Since launch (cumulative)	344.78%	156.09%

Risk statistics table

Statistic	Fund
Volatility (Last three years, annualised)	6.42%
Maximum drawdown	-20.79%
Highest one-year return	24.53%
Lowest one-year return	-12.31%
Sharpe ratio (Since launch, R _f = 0%)	1.20

Performance calculated using the Total Returns Index (TRI), net of fees, with all dividend and/or income declarations reinvested on the declaration date at the net asset value price at that time. Investment performance is for illustrative purposes only.

General

Collective Investment Schemes (Unit Trusts) are generally medium to long-term investments. The value of participatory interests (units) or the investment may go down as well as up. Past performance is not necessarily a guide to future performance. Collective investment schemes are traded at ruling prices and can engage in borrowing and scrip lending (i.e. borrowing and lending of assets). The manager does not provide any guarantee, either with respect to the capital or the return of a portfolio. Any forecasts and/or commentary in this document are not guaranteed to occur. Different classes of participatory interests apply to these portfolios and are subject to different fees and charges. A schedule of all fees and charges, inclusive of VAT and maximum commissions, is available on request from us or from your financial adviser. Forward pricing is used.

Glossary

Sharpe Ratio - this is a measure of the excess return an investor receives for the additional volatility that they endure for holding a riskier asset. This compares the return on an investment with its risk.

Information Ratio - this is a measure of the risk-adjusted return of a portfolio relative to a certain benchmark.

Important information

The collective investment scheme may borrow up to 10% of the market value of the portfolio to bridge insufficient liquidity. The ability of the portfolio to repurchase, is dependent upon the liquidity of the securities and cash of the portfolio. A manager may suspend repurchases for a period, subject to regulatory approval, to await liquidity, and the manager must keep the investors informed about these circumstances.

Lump-sum performance returns are being quoted. Income distributions, prior to deduction of applicable taxes, are included in the performance calculations. NAV to NAV figures have been used for the performance calculations, as calculated by the manager at the valuation point defined in the deed, over all reporting periods. Investment performance calculations are available for verification upon request by any person. Reinvestment of income is calculated on the actual amount distributed per participatory interest, using the ex-dividend date NAV price of the applicable class of the portfolio, irrespective of the actual reinvestment date. The performance is calculated for the fee class. The individual investor performance may differ, as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax.

The rate of return is calculated on a total return basis, and the following elements may involve a reduction of the investor's capital: interest rates, economic outlook, inflation, deflation, economic and political shocks or changes in economic policy. Annualised returns are period returns re-scaled to a period of one year. This allows investors to compare returns of different assets that they have owned for different lengths of time. All period returns greater than one year have been annualised. Returns for periods less than one year have not been annualised. A cumulative return is the aggregate amount an investment has gained or lost over time, independent of the period of time involved. Actual annual figures are available to the investor on request. Illustrative investment performance is for illustrative purposes only.

What is the total investment charge (TIC)

Total expense ratio (TER) is the percentage of the value of the portfolio that was incurred as expenses relating to the administration (charges, levies and fees) of the portfolio. TER is calculated over rolling 3 years (or since inception, where applicable), and is annualised, to the most recent calendar quarter-end. A higher TER does not necessarily imply a good return. The current TER may not necessarily be an accurate indication of future TER's. Transaction costs (TC) is the percentage of the value of the portfolio that was incurred as costs relating to the buying and selling of the assets underlying the portfolio. Transaction Costs are a necessary cost in administering the portfolio and impacts portfolio returns. It should not be considered in isolation, as returns may be impacted by many other factors over time, including market returns, the type of financial product, the investment decisions of the investment manager, and the TER. Calculations are based on actual data, where possible, and best estimates, where actual data is not available. Total investment charges (TIC) is the percentage of the value of the portfolio that was incurred as costs relating to the investment of the portfolio. It is the sum of the TER and TC.

For additional information on the portfolio, refer to the application forms, quarterly investment report and minimum disclosure documents, available on our website, www.discovery.co.za, from your financial adviser, or on request from the manager, free of charge.

The complaints policy and procedure, as well as the conflicts of interest management policy, are available on our website www.discovery.co.za. Associates of the manager may be invested within certain portfolios, and the details thereof are available from the manager. The manager has the right to close certain portfolios to new investors, in order to manage them more efficiently, in accordance with their mandates. This document was published on 12 March 2026.
